Basic instruments hip

Basic instruments hip

Mathys offers various basic instruments to complement our hip portfolio. The bone retractors are available with **standard or long** soft tissue protection areas, and the **option of a handle** extension. The saddle-shaped geometry reduces trauma to the soft tissues. Due to the Subtilis 2.0 surface, the instruments are more corrosion-resistant, easier to clean and thus have a longer service life. The **second angle in the handle** also provide a better view of the operative field. The **subtle design** improves the approach compared to existing retractors, especially in narrow spaces. The **interconnecting radii** enable the best possible distribution of pressure on muscles and soft tissues.

In addition to retractors, we offer other basic instruments such as mallets, forceps, chisels, curettes, rasps and bone spreaders, which are helpful to the surgeon as basic instruments during treatment. Many of these instruments are modern optimisations of the designs made for Professor M. E. Müller in the 1950s and 1960s, developed in close cooperation with our clinical partners.

Bone retractors

- Pressure distribution on muscles and soft tissues optimised via saddle-shaped design with the option of a long soft tissue protection area and a handle extension
- Good view of the operative field due to glare-free Subtilis 2.0 surfaces and second angle in the handle
- Optimum access even in narrow spaces due to subtle design
- Pressure distribution on muscles and soft tissues optimised compared to conventional designs via two interconnecting radii

Advantages

Chisels

- High cutting performance and durability due to hardened, razor-sharp steel
- Good view of the operative field thanks to glare-free Subtilis 2.0 surfaces
- Durable, safe, hygienic and moisture-repellent plastic handles

Curettes and rasps

- Ergonomic modification offers better patient protection
- Good view of the operative field thanks to glare-free Subtilis 2.0 surfaces
- Durable, safe, hygienic and moisture-repellent plastic handles

Forceps and bone spreaders

- Lightweight yet durable design allows weight reduction in surgical trays
- Easy handling with intuitive design
