balanSys BICONDYLAR

balanSys BICONDYLAR

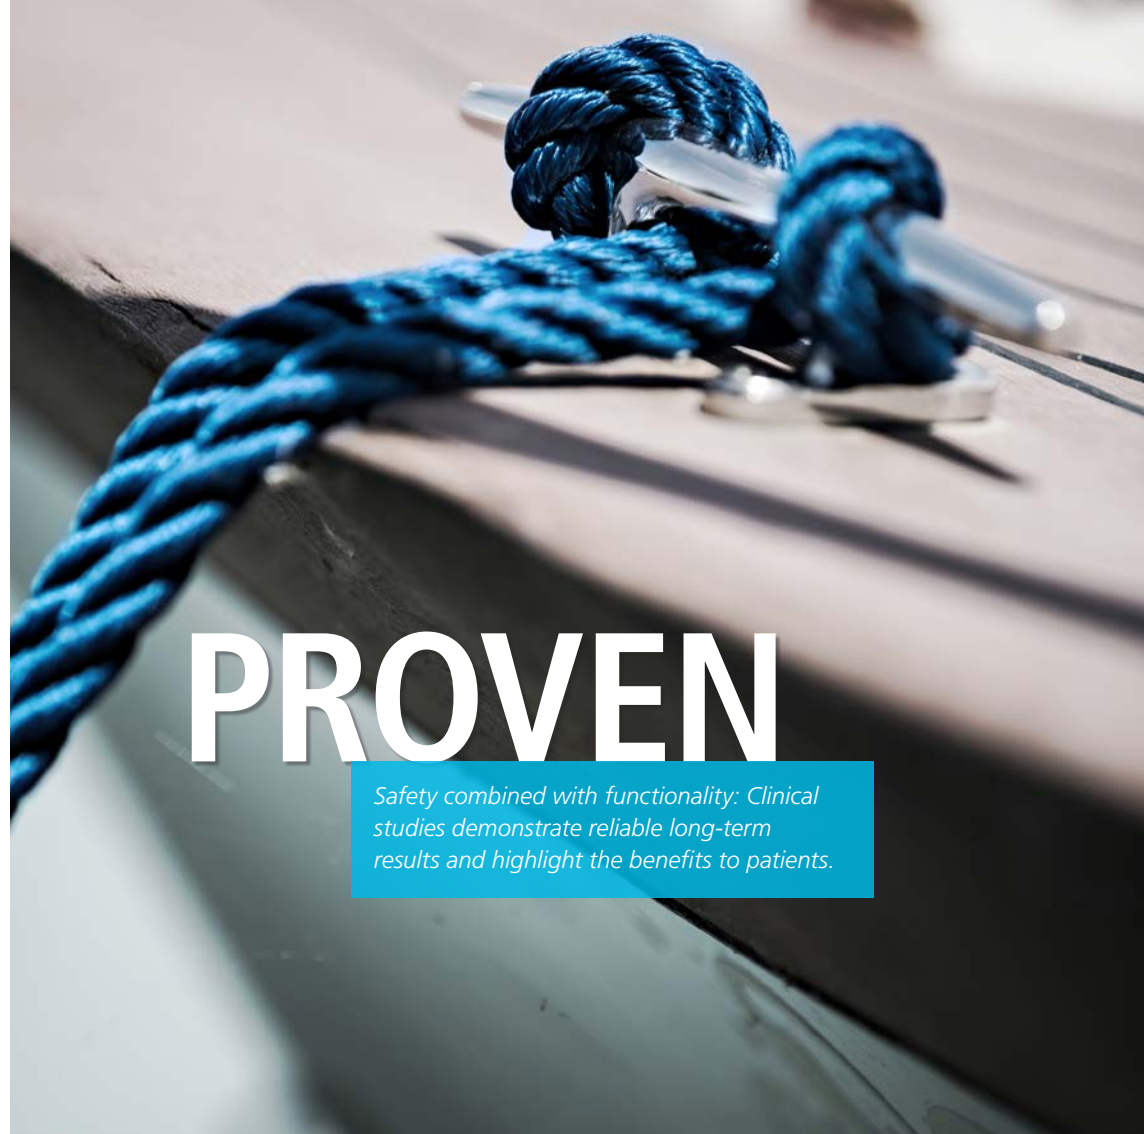

PROVEN

A proven implant design with reliable clinical results in joint replacement registries and medium and long-term studies.

ENHANCED

- + *leggera instruments*
- + *vitamys inlays*
- + *refined height increments*

PROVEN

Safety combined with functionality: Clinical studies demonstrate reliable long-term results and highlight the benefits to patients.

STABLE

The unique balanSys BICONDYLAR design allows joint line preservation and restoration of ligament tension, achieving stability throughout the entire range of motion.

ENHANCED

The enhanced leggera instruments offer refined precision and technology. Additional inlays in proven vitamys material with refined height increments increase longevity while reducing wear.

PRECISE

The enhanced design of the leggera instrumentation promises accurate settings with a focus on precise, reproducible results at a «click».

DURABLE

Stable anchoring of the components with congruent articulation in combination with the proven vitamys material and femoral single-radius design, achieve a durable total knee replacement.

Preservation in motion
